

As a behavioral data scientist, my academic interests are broad, interdisciplinary, and inspired by complex systems thinking. I can combine techniques from the behavioral sciences, such as psychology, sociology, business, and economics, with computational approaches from computer science, statistics, information and communication systems, data-centric engineering, and mathematics. With this interdisciplinary set of skills, I can model, understand, and predict human behavior differently. I use this knowledge as a researcher and as a professional consultant.
